Product Description

Power Trim 200-8

Power Trim professional walk behind edger, 3.5 h.p. Briggs engine, edge only

Specifications

All Power-Trim edger frame components are 100% interchangeable - engine type and front wheel configuration determine the model number.

Manual clutch disengagement is standard on all models.

8" wheel models offer extreme versatility when edging curves and circles and can bevel cut 10 degrees left of vertical.

All curb-riding units will edge while riding a 6" curb.

Using "Trim Mode" means no more hand clipping grass around poles and trees or along fences and walls - just turn the blade flat and mow.
